Traffic congestion on 885 between 40 and 147 during morning and evening commutes is problematic					John Dailey

Staff Response by Yanping Zhang:

Thank you for your valuable comment. The 2024 update of the Congestion Management Process (CMP) includes performance measures and mitigation strategies for this section of NC 147/I-885/Durham Freeway, based on the 2019 and 2021 traffic data. These will be incorporated into the ongoing 2055 Metropolitan Transportation Plan and may inform a traffic mitigation project for NC 147/I-885, based on more stable traffic conditions and the most recent data following the opening of the new I-885 segment/East End Connector in late 2022.
